DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the 3rd charge pump and the 2nd comparator must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 14-34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 14-34 are indefinite because it is not clear to the examiner if the detector and the threshold level generator are two separate elements or if they are the one element that has two separate functions. It appears to the examiner from review of the specification and the drawings that both elements refer to the level generator (202). Correction or clarification is required.

Allowable Subject Matter

4. Claims 1-13 are allowed.

5. Claims 14 and 24 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

6. Claims 15-23 and 25-34 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

7. The following is an examiner's statement of reasons for allowance: Claims 1-13 are allowed because the closest prior art of record fails to disclose a circuit as shown in Figure 1B wherein the method of detecting loss of signal on a pair of differential signal lines comprises generating a signal level from the voltages on the pair of differential signal lines, the signal level being averaged over a first period of time (step 106); generating a reference level from the threshold level and the detected common mode level, the reference level being averaged over a second period of time longer than the first period of time; and comparing the signal level to the reference level to determine if a signal is present on the pair of signal lines in combination with the rest of the limitations of the base claims and any intervening claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
